

He's Gone Bananas Over Belden's HomeChoice® Cables...

But He Likes the Banana Peel® Cables Best.

Belden has a whole bunch of residential cables to choose from:

- UL verified Cat 5e and Cat 6 UTP and fiber data cables for multimedia, voice, video and data use.
- Series 6, RG-59 and component video coax cables for distributed video, HDTV, DBS, CATV, SVHS, CCTV and cable modem applications.
- Digital audio, speaker and interconnect cables for audio distribution.
- Paired, unshielded, coax and composite cables for security and alarm applications.
- Over 20 different, UL-verified composite (multi-purpose) cables to achieve single-pull labor and cost efficiencies.

And since Belden manufactures all of the cables in the HomeChoice line, you benefit from its *innovative technologies*:

- **Banana Peel cables, The Cable Without a Jacket®** — These composite cables feature a patent-pending design that eliminates the need for an overall jacket — making them easy to handle, easy to identify, easy to pull and easy to terminate.
- **Bonded-Pairs** — Belden's patented technology for UTP data cables that prevents performance-robbing gaps from forming between the conductor pairs — even during the rigors of a typical installation. Belden calls this unique after-installation assurance **Installable Performance®**.

So, be picky. Call 1-800-BELDEN-4 or go to Belden's Web site for more information, at www.belden.com.
