#### Annual Maintenance Plan from Hirschmann™

The Annual Maintenance Plan (AMP) offers you cost-effective updates for Industrial HiVision, the network management software from Hirschmann™. For a single payment, the latest version will be available automatically for a period of twelve months – for less than half the cost of a single update.

**The AMP enables exact calculation and precise budgeting for the costs of network administration and monitoring for one year. The service provides maximum transparency with regard to total cost of ownership.**

- Updates for Industrial HiVision at extremely favorable conditions
- Full cost control without any contractual obligation
- Maximum network transparency through the use of the latest software version

Network availability is a key factor for seamless production processes, but system failures can only be prevented through foresight – in other words, act, don't react. And that is exactly why Hirschmann™ developed Industrial HiVision. Industrial HiVision is specifically designed to reliably manage industrial networks: from configuring the devices and visualizing the network topology, to detailed status displays. Additional functions are constantly being added to reflect user requirements. On average, two new versions are released each year, and users who subscribe to the AMP benefit from these immediately.

#### Applications

The AMP is suitable for all applications that make the highest demands on the availability of the network, particularly where problems can rapidly lead to costly downtime, harmful environmental effects or even danger to human life.

Such applications include traffic control systems, industrial plants in the oil and gas sector, and conveyor lines in the automotive industry; but many other industries can also benefit by opting for maximum network transparency – which means, opting for the AMP.

#### Customer benefits

The AMP offers you cost-effective updates for the Industrial HiVision network management software. For a single payment, you will automatically receive the latest version for a period of twelve months, saving up to 60% compared to the purchase of a one-time update. No signed contract is required to use the service. You simply need to accept the license terms that apply to the installation of Industrial HiVision. Twelve months later, you can decide whether or not you want to extend the service. That way you always have full control of the costs. By always providing you with the latest software version, the AMP also guarantees optimum network transparency and hence maximum reliability for your machines and equipment.

**A new product to serve your needs.  
Be certain.**

The Annual Maintenance Plan is an all-inclusive package for maximum network transparency.

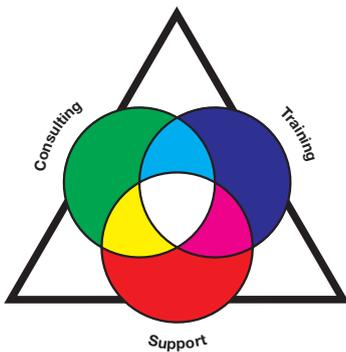

## Annual Maintenance Plan from Hirschmann™

Under the Annual Maintenance Plan, the user makes a single payment and then automatically receives the latest version of the Industrial HiVision network management software for a period of twelve months from the date of the order. The price depends on the number of monitored IP addresses. The costs are staggered: from 16 addresses through 32, 64, 128, 256, 512, 1024, 2048, up to 4096. The user receives a printed registration code used to generate licenses for each Industrial HiVision version that is issued during the AMP term. To use the AMP, you need a full license for Industrial HiVision version 04.0.00 or later. If more than one full license for Industrial HiVision is installed on a given PC, a single AMP can be used to perform updates for the entire number of nodes.

### Benefits at a glance

- Always have the latest version of Industrial HiVision for less than half the cost of a single update, giving you full cost control without any contractual obligation
- Optimum network transparency and hence maximum application availability
- Staggered annual fee depending on the number of monitored IP addresses
- Printed registration code that can be used to generate the licenses
- Suitable for all users with a full license for Industrial HiVision version 04.0.00 or later

## The Belden® Competence Center

As the complexity of communication and connectivity solutions has increased, so have the requirements for design, implementation and maintenance of these solutions. For users, acquiring and verifying the latest expert knowledge play a decisive role in this. As a reliable partner for end-to-end solutions, Belden offers expert consulting, design, technical support, as well as technology and product training courses from a single source: Belden Competence Center. In addition, we offer you the right qualification for every area of expertise through the world's first certification program for industrial networks. Up-to-date manufacturer's expertise, an international service network and access to external specialists guarantee you the best possible support for products from Belden®, GarrettCom®, Hirschmann™ and Lumberg Automation™. Irrespective of the technology you use, you can rely on our full support – from the implementation to the optimization of every aspect of daily operations.

### About Belden

Belden Inc., a global leader in high quality, end-to-end signal transmission solutions, delivers a comprehensive product portfolio designed to meet the mission-critical network infrastructure needs of industrial, enterprise and broadcast markets. With innovative solutions targeted at reliable and secure transmission of rapidly growing amounts of data, audio and video needed for today's applications, Belden is at the center of the global transformation to a connected world. Founded in 1902, the company is headquartered in St. Louis, USA, and has manufacturing capabilities in North and South America, Europe and Asia.
